Contents

Chapter 1	Introduction	9
Chapter 2	Host-Derived Angiogenesis Maintains Bone Blood Flow after Withdrawal of Immunosuppression: Development of a Novel Method of Composite Tissue Allotransplantation	39
Chapter 3	Short-term immunosuppression and surgical neoangiogenesis with host vessels maintains long-term viability of vascularized bone allotransplants	59
Chapter 4	Living Bone Allotransplants Survive by Surgical Angiogenesis Alone: Validation of a Novel Method of Composite Tissue Allotransplantation	73
Chapter 5	Augmentation of Surgical Angiogenesis in Vascularized Bone Allotransplants with Host-Derived AV Bundle Implantation, Basic Fibroblast Growth Factor and Vascular Endothelial Growth Factor Administration	95
Chapter 6	Long-term Effects of Fibroblast Growth Factor-2 and Vascular Endothelial Growth Factor Administration on Angiogenesis and Bone Formation in Vascularized Bone Allotransplants	107
Chapter 7	Revascularization and Bone Remodeling of Frozen Allografts Stimulated by Intramedullary Sustained Delivery of Basic Fibroblast Growth Factor and Vascular Endothelial Growth Factor	119
Chapter 8	Repopulation of Vascularized Bone Allo-transplants with Recipient-Derived Cells: Detection by Laser Capture Microdissection and Real-Time PCR	131

Chapter 9	A Modified Vascularized Whole Knee Joint Allotrans-plantation Model in the Rat	147
Chapter 10	Measurement of Bone Blood Flow Using the Hydrogen Washout Technique - Part I: Quantitative evaluation of tissue perfusion in the laboratory rat	169
Chapter 11	Measurement of Bone Blood Flow Using the Hydrogen Washout Technique – Part II: Validation by Comparison to Microsphere Entrapment	183
Chapter 12	Living-Related Nerve Allograft Transplantation Complicated by Epstein-Barr Virus Infection: A Case Report	203
Chapter 13	Summary and Conclusions	215
Chapter 14	Summary in Dutch	223
Chapter 15	PhD Portfolio	231
	Credits	239
	Curriculum Vitae	247
