# Table of Contents

**Part I: Introduction**  
1

**Part II: Domain Model Development Depression and Mood**  
2. A Computational Model for Mood Dynamics and its Use in a Virtual Patient for Depression Therapy  
3. Comparative Computational Analysis of Therapeutical Interventions for Depression  
4. Towards Fully Automated Psychotherapy for Adults: The Protocol for a Pilot Study Investigating Behavioral Activation via Mobile Phone and Internet  
5. Validation of a Model for Coping and Mood for Virtual Agents  

**Part III: Domain Model and Knowledge Development Task Execution**  
6. Relating Personality and Physiological Measurements to Task Performance Quality  
7. Design and Validation of a Model for a Human's Functional State and Performance  
8. Performance Measures to enable Agent-Based Support in Demanding Circumstances  

**Part IV: Ambient Agent Models Depression and Mood**  
9. Towards Fully Automated Psychotherapy for Adults: BAS - Behavioral Activation Scheduling via web and mobile phone  
10. Towards Fully Automated Behavioral Activation Therapy for Depression: A Pilot Study of a Novel Intervention offered via Mobile Phone  
11. Utilization of a Virtual Patient Model to Enable Tailored Therapy for Depressed Patients  

**Part V: Ambient Agent Models Task Execution**  
12. Methods for Model-Based Reasoning within Agent-Based Pervasive Computing Applications  
13. An Intelligent Agent Model with Awareness of Workflow Progress  
14. An Ambient Agent System Assisting Humans in Complex Tasks by Analysis of a Human's State and Performance  

**Part VI: Discussion**  
15

**Affiliations Co-authors**  
16

**Samenvatting**  
17

**SIKS Dissertation Series**
