Table of Contents

I.	Introduction	1
	1. Introduction	1
II.	Human Functional State	15
	2. Design and Validation of a Model for a Human's Functional State and Performance	17
	3. An Agent Model for Analysis of Human Performance Quality	51
	4. Relating Personality and Physiological Measurements to Task Performance Quality	77
	5. Performance Measurements to Enable Agent-Based Support in Demanding Circumstances	93
III.	Attention	107
	6. A System to Support Attention Allocation: Development and Application	109
	7. Personalization of Computational Models of Attention by Simulated Annealing Parameter Tuning	135
IV.	Situation Awareness	149
	8. Intelligent Information Acquisition	151
	9. Modeling Situation-Awareness in Human-Like Agents Using Mental Models	173
	10. Learning Belief Connections in a Model for Situation Awareness	191
	11. Design of an Optimal Automation Agent: Finding a Balance between Task Engagement and Exhaustion	207
V.	Interaction/Integration of Functional State	221
	12. An Integrated Model for Attention and Functional State	223
	13. An Integrated Agent Model addressing Situation Awareness and Functional State in Decision Making	237
	14. An Ambient Agent System Assisting Humans in Complex Tasks by Analysis of a Human's State and Performance	255
	15. A Multi-Agent model of Team Task Execution using Situation Awareness	285
VI.	Discussion	299
	16. Discussion and Future Work	299
	Samenvatting	313
	SIKS Dissertation Series	315
