<b>Acknowledgments</b>	<b>ix</b>
<b>Summary</b>	<b>xi</b>
<b>Samenvatting</b>	<b>xiii</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Scope of the thesis . . . . .	2
1.1.1 Elevated plateaus in rifted margins . . . . .	2
1.1.2 Post-rift compressional reactivation in rifted margins . . . . .	3
1.1.3 The NW African margin . . . . .	3
1.2 Geology of the Moroccan rifted margin . . . . .	4
1.2.1 Geomorphic domains . . . . .	4
1.2.2 Tectono-morphological units . . . . .	6
1.2.3 Regional tectonic setting of the passive margin . . . . .	7
<b>2 Kinematic and thermal evolution of the Moroccan rifted continental margin: Doukkala-High Atlas Transect</b>	<b>11</b>
2.1 Introduction . . . . .	12
2.2 Geological Setting . . . . .	14
2.3 Present day section . . . . .	16
2.3.1 Data and methods . . . . .	16
2.3.2 The lithosphere and crust . . . . .	18
2.3.3 The upper crust . . . . .	18
2.4 The Doukkala-High Atlas rifted continental margin in the Late Cretaceous . . . . .	20
2.4.1 Methods and uncertainties . . . . .	20
2.4.2 The pre-rift . . . . .	22
2.4.3 The syn-rift . . . . .	22
2.4.4 The post-rift . . . . .	24
2.5 Quantitative description of syn- and post-rift evolution . . . . .	25
2.5.1 Syn-rift extension and crustal thinning . . . . .	25
2.5.2 Vertical movements during and following rifting . . . . .	26
2.6 2D thermo-kinematic modeling of the Doukkala-High Atlas transect . . . . .	27
2.6.1 Set-up and configuration of the model . . . . .	28
2.6.2 Model input . . . . .	28
2.6.3 The best fit model . . . . .	30

2.6.4	Sensitivity analysis . . . . .	34
2.7	Discussion . . . . .	37
2.7.1	Geometric models of rifting . . . . .	38
2.7.2	Syn-rift strength of the lithosphere . . . . .	38
2.7.3	Anomalous vertical movements in the central part of the Doukkala– High Atlas transect . . . . .	40
2.8	Conclusion . . . . .	41
<b>3</b>	<b>Kinematic and thermal evolution of the Moroccan rifted continental margin: Tarfaya–Anti-Atlas Transect</b>	<b>43</b>
3.1	Introduction . . . . .	44
3.2	Geological setting and stratigraphy . . . . .	46
3.3	Seismic analysis of Tarfaya margin . . . . .	50
3.3.1	Data and methods . . . . .	50
3.3.2	Description of the seismic units . . . . .	50
3.4	Geological evolution of Tarfaya margin . . . . .	57
3.4.1	Syn-rift extension . . . . .	57
3.4.2	Post-rift basins . . . . .	62
3.4.3	Subsidence analysis across Tarfaya margin . . . . .	64
3.4.4	Deep crustal structure of Tarfaya margin . . . . .	67
3.5	2D thermo-kinematic modeling of Tarfaya margin . . . . .	70
3.5.1	Overview . . . . .	70
3.5.2	Input data: constraints and uncertainties . . . . .	70
3.5.3	Modeling results . . . . .	73
3.6	Discussion and conclusions . . . . .	84
3.6.1	Initial rifting: crustal deformation in the proximal domains . . . . .	85
3.6.2	Final rifting: lithospheric necking in the distal margin . . . . .	85
3.6.3	Post-rift: thermal subsidence vs. uplift . . . . .	85
3.6.4	Conclusions . . . . .	86
<b>4</b>	<b>Modeling lithospheric extension and small-scale convection dur- ing passive margin formation: Implications for the Nova Scotia– Doukkala conjugate margins in Mesozoic times</b>	<b>89</b>
4.1	Introduction . . . . .	90
4.2	Regional geological background . . . . .	92
4.2.1	Rifting . . . . .	92
4.2.2	Drifting . . . . .	92
4.2.3	Early post-rift uplift . . . . .	93
4.3	The case of Nova Scotia–Doukkala conjugate margins . . . . .	93
4.3.1	Stratigraphic architecture . . . . .	93
4.3.2	Deep crustal structure . . . . .	95
4.3.3	Doukkala margin . . . . .	96
4.3.4	Crustal and subcrustal thinning . . . . .	97

4.4	Kinematic of extension in the conjugate margins: implications for the numerical models . . . . .	98
4.5	Numerical model description . . . . .	100
4.5.1	Model formulation . . . . .	101
4.5.2	Modeling approach . . . . .	103
4.6	Description of the modeling results . . . . .	105
4.6.1	Set I: strong and stable mantle lithosphere . . . . .	105
4.6.2	Set II: weak and convective mantle . . . . .	108
4.6.3	Set III: inherited crustal weaknesses . . . . .	110
4.6.4	Surface response to lithospheric extension . . . . .	113
4.7	Implications for the Central Atlantic margins: a discussion . . . . .	113
4.7.1	Geometry of lithospheric extension . . . . .	113
4.7.2	Post-rift vertical motions . . . . .	115
4.7.3	Conclusions . . . . .	118
<b>5</b>	<b>Post-rift vertical movements and horizontal deformations in the eastern margin of the Central Atlantic: Middle Jurassic to Early Cretaceous evolution of Morocco</b>	<b>119</b>
5.1	Introduction . . . . .	120
5.2	Jurassic to Early Cretaceous vertical movements in Morocco . . . . .	121
5.2.1	The geological framework . . . . .	121
5.2.2	Kinematics of the NW Morocco rifted margin . . . . .	122
5.3	Vertical movements and passive margin evolution . . . . .	123
5.3.1	Observed movements . . . . .	123
5.3.2	Comparison with model predictions . . . . .	125
5.4	Syn-sedimentary deformation in the Essaouira Basin . . . . .	127
5.4.1	Imi n'Tanout . . . . .	127
5.4.2	Tidsi anticline . . . . .	134
5.4.3	Amsittene anticline . . . . .	136
5.5	The Middle Jurassic to Early Cretaceous tectonic evolution of central Western Morocco . . . . .	137
5.5.1	Kinematics and tectonics of section from the MAM to the Essaouira basin . . . . .	137
5.5.2	Extrapolation to surrounding areas . . . . .	139
5.6	Conclusions . . . . .	140
<b>6</b>	<b>Birth of the Central Atlantic and evolution of NW Africa in Mesozoic times: Synopsis and Conclusions</b>	<b>143</b>
6.1	Syn-rift phase . . . . .	144
6.1.1	Timing of the Central Atlantic rifting . . . . .	144
6.1.2	Geometry of the Central Atlantic rifting . . . . .	145
6.1.3	Syn-rift vertical movements . . . . .	145
6.2	Post-rift phase . . . . .	146
6.2.1	Rifting-drifting transition . . . . .	146
6.2.2	Post-rift evolution . . . . .	148

6.3 Conclusions . . . . .	148
