## Contents

1 Introduction  
1.1 Correlation is not causation, but...  
1.2 Context and main research question  
1.2.1 Errors in statistical independence tests  
1.2.2 Ranking of causal predictions  
1.2.3 Joint inference from observational and interventional datasets  
1.2.4 Distributed convex optimization for probabilistic logic inference  
1.3 Summary of the chapters and contributions  

2 Ancestral Causal Inference  
2.1 Introduction  
2.2 Preliminaries  
2.3 Related work on conflict resolution  
2.4 ACI: Ancestral Causal Inference  
2.4.1 New rules  
2.4.2 Optimization of loss function  
2.4.3 Constrained optimization in ASP  
2.4.4 Weighting schemes  
2.4.5 A simple integration of interventional knowledge  
2.5 Scoring causal predictions  
2.5.1 Soundness and completeness  
2.5.2 Asymptotic consistency  
2.6 Evaluation on synthetic data  
2.6.1 Compared methods  
2.6.2 Synthetic data  
2.6.3 Evaluation  
2.7 Evaluation on real data  
2.7.1 Experimental conditions  
2.7.2 Compared methods  
2.7.3 Evaluation on no-ICAM and ICAM batches  
2.7.4 Comparison with other approaches on Sachs et al. dataset
4.3.5 Termination: convergence criteria comparison with ACO .................................. 102
4.4 Optimizations .................................................. 103
4.5 Evaluations .................................................. 105
  4.5.1 Evaluation datasets .................................... 106
  4.5.2 Comparison with ACO ................................. 107
  4.5.3 Optimization Evaluation .............................. 111
4.6 Limitations and Conclusions ............................... 115

5 CONCLUSION .............................................. 117
  5.1 Results .................................................... 117
  5.2 Limitations and future work ............................ 119
    5.2.1 Causal Discovery for systems with feedback .... 119
    5.2.2 Scaling up causal discovery ....................... 120
