Contents

1	Introduction	9
1.1	Overview	9
1.2	About failure of p-aramid fibers	10
1.3	Modeling failure from different perspectives	12
1.4	Trends in failure modeling at constant load	14
1.4.1	A kinetic description of failure	14
1.4.2	Stress Corrosion Cracking (SCC)	15
1.5	A versatile damage model	16
1.6	Objectives and overview of thesis	18
1.6.1	Chapter 2: predicting long-term time-to-failure	19
1.6.2	Chapter 3: recovering erroneous literature on the truncated Weibull distribution	19
1.6.3	Chapter 4: residual strength of Twaron fibers	20
1.6.4	Chapter 5: non-Coleman behavior of Twaron fibers	20
2	Modeling failure of high performance fibers: on the prediction of long-term time-to-failure	23
2.1	Introduction	23
2.2	Introduction and theoretical analysis of the Coleman model	26
2.3	Predicting long-term time-to-failure - theory	29
2.4	Predicting long-term time-to-failure - Monte Carlo simulations	33
2.4.1	Estimation of model parameters	34
2.4.2	Prediction of time-to-failure distribution	35
2.4.3	Prediction of the ‘short times’-tail of the time-to-failure distribution	35
2.4.4	Effect of fiber properties on time-to-failure prediction	37
2.4.5	Comparison between MLE and LSM prediction routes	39
2.4.6	Power-law versus exponential failure behavior	40
2.5	Discussion and conclusions	41

3	Re-examination of moment expressions for truncated Weibull distributed variables	43
3.1	Introduction	43
3.2	Erroneous moment expressions in literature	45
3.3	Overview of moment expressions for truncated Weibull variables	47
4	A probabilistic approach on residual strength and damage buildup of high performance fibers	49
4.1	Introduction	49
4.2	Model assumptions	52
4.2.1	Modeling damage accumulation	52
4.2.2	Accumulated damage at the moment of breaking	53
4.3	Residual strength and residual lifetime	55
4.3.1	Theoretical distribution functions	55
4.3.2	Fitting p-aramid fibers to Coleman	58
4.4	Discussion and Conclusions	65
5	Probabilistic lifetime models for materials subjected to high-low and low-high single step loading	67
5.1	Introduction	68
5.2	The Life Fraction Rule and regular material failure behavior	71
5.3	A class of regular models	72
5.4	Non-regular model A: Damage-at-break inversely proportional to actual load . .	75
5.4.1	Constant load program	75
5.4.2	Single step constant load program (SSP)	76
5.4.3	Arbitrary load program	83
5.5	Non-regular model B: Power-law damage accumulation	85
5.5.1	Constant load program	85
5.5.2	Single step constant load program (SSP)	86
5.5.3	Arbitrary load program	90
5.6	Experiments on Twaron fiber subjected to single step-load programs	92
5.6.1	Time-to-failure measurements	93
5.6.2	Testing the validity of regular models for Twaron yarn	94
5.6.3	Testing the validity of non-regular models (A and B) for Twaron yarn .	96
5.7	Discussion and conclusions	100
A	Weibull, Gumbel and Lognormal distribution	103
A.1	Weibull distribution	103
A.2	Gumbel distribution	103
A.3	Lognormal distribution	103
A.4	Gumbel distributed $Y = \ln X$ for Weibull distributed X	104

B Maximum Likelihood Estimation	105
C Transformations	109
D Characteristics of the residual distributions	111
Bibliography	113
