

Table of contents

1	Introduction	1
	References	12
2	Palette of fluorinated voltage-sensitive hemicyanine dyes	19
2.1	Introduction	19
2.2	Results	20
2.2.1	Fluorinated Hemicyanine VSDs	20
2.2.2	Recording bAPs from Individual Dendrites and Spines in a Cortical Brain Slice	23
2.2.3	Spatiotemporal Mapping of Cardiac Tissue Physiology	24
2.2.4	Random Access Two-Photon Recording of Electrical Activity in Cerebellum	27
2.2.5	Long-Wavelength Two-Photon Measurement of V_m in Cultured Hippocampal Neurons	28
2.3	Discussion	31
2.4	Materials and Methods	33
	References	38
3	Optimal lens design and use in laser-scanning microscopy	41
3.1	Introduction	41
3.2	Results	42
3.3	Discussion	56
3.4	Methods	57
3.5	Appendix	60
	References	66
4	Label-free live brain imaging and targeted patching with third-harmonic generation microscopy	69
4.1	Introduction	69
4.2	Results and Discussion	70
4.3	Materials and Methods	77
4.4	Supplemental Information	86
	References	89

5 DAQLab - A hierarchical task control and data acquisition software for laser-scanning microscopy and beyond	91
5.1 Introduction	91
5.2 Hierarchical task control	92
5.3 DAQLab modules and GUI presentation	100
5.4 Application 1: Two-photon laser scanning imaging and recording of fluorescence from point ROIs	108
5.5 Application 2: Synaptic activation using two-photon glutamate uncaging	115
5.6 Discussion	118
References	120
6 Discussion	123
References	128
Summary	131
Nederlandse samenvatting	133
List of publications	135
Acknowledgements	137
