## Contents

**Chapter 1**  General introduction  

**Chapter 2**  Structure of the *Mycobacterium tuberculosis* type VII secretion system chaperone EspG5 in complex with PE25–PPE41 dimer  

**Chapter 3**  Structural variability of EspG chaperones from mycobacterial ESX-1, ESX-3 and ESX-5 type VII secretion systems  

**Chapter 4**  A unique NAD$^+$ phosphorylase toxin triggers bacterial suicide in *Mycobacterium tuberculosis*  

**Chapter 5**  The mycobacterial VapB45 antitoxin comprises a novel two-fold repeated helix-turn-turn motif arrangement  

**Chapter 6**  Summarizing discussion  

**Addenda**  Summary  

Samenvatting
