Contents

1	Introduction	1
1.1	An artificial intelligence introduction to this thesis	1
1.2	My introduction to this thesis	3
1.3	Cumulative Prospect Theory	6
1.4	Outline	9
2	The 2011 European Short Sale Ban: A Cure or a Curse?	12
2.1	Introduction	12
2.2	Data and methodology	14
2.3	Discussion of results	17
2.3.1	VaR levels and volatility skews	19
2.3.2	Financial contagion risk	23
2.3.3	Panel regression analysis	26
2.3.4	Robustness Tests	32
2.4	Conclusion	34
2.A	Appendix: Implied jump risk estimation	36
2.A.1	Implied jump risk from risk-neutral distributions	36
2.A.2	The Figlewski (2010) approach for extracting RND from implied volatilities	37
2.A.3	The modified Figlewski (2010) approach	38
2.B	Appendix: Extreme value theory	39
3	Single stock call options as lottery tickets: overpricing and investor sentiment	41
3.1	Introduction	41
3.2	Data and Methodology	43
3.2.1	Subjective density functions	45
3.2.2	Estimating CPT parameters	46
3.2.3	Density function tails' consistency test	47
3.2.4	Estimating RND and EDF	49
3.3	Empirical analysis and results	51
3.3.1	Estimated CPT long-term parameters	51
3.3.2	Density functions tails' consistency test results	52
3.3.3	Estimated CPT time-varying parameters	58

3.3.4	Time variation in probability weighting parameter and investors' sentiment	62
3.4	Robustness tests	67
3.4.1	Kupiec's test for tail comparison	67
3.4.2	Prelec's weighting function parameter	70
3.4.3	Estimating time-varying γ under different assumptions for δ , α and β	71
3.4.4	Overweight of (right) tails driven by IV of single stock options	72
3.5	Conclusion	74
3.A	Appendix: Risk-neutral densities and implied volatility analytics	76
3.A.1	Subject density function estimation	76
3.A.2	Single stock weighted average implied volatilities	77
3.B	Appendix: Machine learning methods	79
3.B.1	Least Absolute Shrinkage and Selection Operator (Lasso)	79
3.B.2	k-Nearest-Neighbor classifier	79
3.C	Appendix: Welch and Goyal (2008) equity market predictors	80
4	Implied Volatility Sentiment: A Tale of Two Tails	81
4.1	Introduction	81
4.2	Data and Methodology	84
4.3	Overweight of tails: dynamics and dependencies	89
4.3.1	Time-varying CPT parameters	89
4.3.2	Overweight of tails and sentiment	90
4.3.3	Overweight of tails, IV skews and higher moments of the RND	93
4.4	Predicting with overweight of tails	97
4.4.1	Predicting returns with <i>DGspread</i> and <i>IV-sentiment</i>	97
4.4.2	<i>IV-sentiment</i> pair trading strategy	99
4.4.3	Out-of-sample equity returns predictive tests	107
4.4.3.1	Univariate models and forecast combination	107
4.4.3.2	"Kitchen sink" and machine learning-based models	111
4.4.4	<i>IV-sentiment</i> and equity factors	113
4.4.5	Behavioral versus risk-sharing perspectives	116
4.5	Conclusion	119
5	Predictable Biases in Macroeconomic Forecasts and Their Impact Across Asset Classes	121
5.1	Introduction	121
5.2	Forecast biases, anchoring and rationality tests	124
5.3	Data and Methodology	126
5.3.1	Economic surprise predictive models	128
5.3.2	Market response predictive models	128
5.4	Empirical analysis and results	130
5.4.1	Predicting economic surprises	130

5.4.2	Market responses around macroeconomic announcements	134
5.4.3	Predicting market responses	138
5.4.4	Market responses, skewness of economic forecasts and regret	145
5.4.5	Robustness tests	148
5.4.5.1	Economic surprise models across regions	148
5.4.5.2	Expected and unexpected surprises	149
5.5	Conclusion	152
5.A	Appendix: Machine learning methods	154
5.A.1	Principal component analysis	154
5.A.2	Ridge regression	154
5.A.3	Random Forest	155
5.A.4	<i>Random forest</i> variable <i>Importance</i> measure	155
6	Conclusion	157
	Bibliography	160
	Summary	171
	Samenvatting	172
	Short biography	173
	Publications	174
	Conferences presentations	175
