CONTENTS

1	Introduction	1
1.1	Fibrin	2
1.2	Polymer theory	3
1.3	A journey across scales	4
1.4	Thesis outline	5
1.5	Ollekebolleke	5
2	Quantitative analysis of the structure of fibrous networks by light scattering	9
2.1	Introduction	11
2.2	Materials and Methods	12
2.2.1	Fibrin	12
2.2.2	Turbidimetry.	12
2.2.3	Confocal microscopy.	14
2.3	Light scattering models	14
2.3.1	Mie scattering on spherical and rod-shaped particles	16
2.3.2	Light scattering models for fibrous networks.	19
2.3.3	Fractal dimension	21
2.4	Results and discussion	25
2.5	Conclusion	28
	Appendices	31
2.A	Fractal dimension: Mikado networks and box counting.	31
2.B	Residuals of turbidimetry fitting	34
3	Elasticity and hydraulic permeability govern normal force in fibrin networks	35
3.1	Introduction	37
3.2	Modeling the normal force under shear and compression	40
3.2.1	Shear deformation	40
3.2.2	Uniaxial compression	45
3.3	Materials and Methods	45
3.3.1	Materials.	45
3.3.2	Methods	46
3.3.3	Application of the biphasic model to sheared networks	52
3.4	Results and discussion	53
3.4.1	Normal force under shear deformation	53
3.4.2	Transient startup regime during oscillatory shear measurements	57
3.4.3	Influence of rheometer shear cell geometry on the normal stress signal	59
3.4.4	Normal force under uniaxial compression	60

3.5	Conclusion	64
	Appendices	65
3.A	Compression of fine clot and coarse clot fibrin gels at multiple protein concentrations	65
4	Connecting fibrin's structure and mechanics by a multiscale approach	67
4.1	Introduction	69
4.2	Background on small-angle X-ray scattering	73
4.3	Materials and Methods	73
4.3.1	Fibrin polymerization	73
4.3.2	Tensile testing	74
4.3.3	Rheology.	78
4.3.4	Confocal rheology	78
4.3.5	Small Angle X-ray Scattering	79
4.3.6	Nematic order parameter	88
4.3.7	Simulations of affine deformations on randomly oriented rods	90
4.4	Results	97
4.4.1	Strain-induced fiber alignment	97
4.4.2	Strain-induced monomer lengthening.	99
4.4.3	SAXS-response of fibrin under extension.	104
4.5	Discussion	106
4.6	Conclusion	110
	Appendices	115
4.A	Background subtraction	115
4.B	Filament orientation and elongation with volume-decreasing network extension	117
4.C	Peak position parallel and perpendicular to strain direction	118
4.D	Comparison of the peak position of 2017 and 2018 beamline sessions	120
4.E	Nonlinear rheology of des- α C fibrin networks	121
4.F	Network failure in confocal rheology	123
5	Fibrin network remodeling under cyclic shear or compressive loading	125
5.1	Introduction	127
5.2	Materials and Methods	128
5.2.1	Fibrin network rheology	128
5.2.2	Optical tweezers	129
5.2.3	Scanning electron microscopy	131
5.2.4	Confocal microscopy.	131
5.2.5	Simulations	131
5.3	Results and discussion	132
5.3.1	Fibrin shear and compression	132
5.3.2	Optical tweezers	135
5.3.3	Molecular origin of network rigidification	136
5.3.4	Simulations	142
5.4	Conclusions.	147

6	Designing and building a light sheet microscope	149
6.1	Introduction	150
6.2	Materials and Methods	152
6.2.1	Setup design	152
6.2.2	Electrical circuit	155
6.2.3	Sample preparation	156
6.3	Results	157
6.4	Conclusion and Outlook	160
7	Summary and Outlook	161
7.1	Summary	162
7.2	Outlook	164
7.2.1	Axial and shear superposition rheology	164
7.2.2	Single-fiber stretching experiments	165
	Samenvatting	173
	About the author	177
	Acknowledgements	179
	Bibliography	181
