Contents

1	Introduction	1
1.1	Single-molecule imaging	1
1.2	Single-molecule manipulation and force spectroscopy	2
1.3	Physics of biomolecules	4
1.3.1	Elasticity of biopolymers, proteins and DNA	5
1.3.2	Elasticity of intra/extra-cellular filamentous networks	7
1.3.3	Elasticity of viruses, vesicles and cells	9
1.4	Outline of this thesis	11
2	Sampling protein form and function	15
2.1	Introduction	16
2.2	Principles of atomic force microscopy	17
2.3	High resolution imaging	21
2.4	Indentation experiments	23
2.5	Unfolding experiments	26
2.6	Conclusion	27
3	Imaging at the (supra)molecular scale	29
3.1	Introduction	30
3.2	Methodology	31
3.3	Compaction of mitochondrial DNA by TFAM	35
3.4	Size of nanocolloidal-albumin for tracing tumours	39
3.5	The pH-regulated assembly of Norwalk virus-like particles	43
3.6	Summary	50
4	Microscopy and force spectroscopy of viruses	51
4.1	Introduction	52
4.2	Atomic Force Microscopy	53
4.3	Imaging of viruses and genome release	54

CONTENTS

4.3.1	AFM imaging of viruses	54
4.3.2	Studying cell-independent genome release by AFM	57
4.4	Imaging virus-cell interactions	60
4.5	Manipulation of viruses in air	62
4.6	Manipulation of viruses in liquid	64
4.6.1	Effect of genome packaging	66
4.6.2	Changes in material properties during maturation	68
4.6.3	Effect of structural modifications in the capsid	68
4.7	Combining experiments and modelling	70
4.8	Conclusion	71
5	Prestress in Norwalk virus nanoparticles	73
5.1	Introduction	74
5.2	Materials and methods	76
5.2.1	Protein preparation	76
5.2.2	Mass spectrometry and native gel electrophoresis	76
5.2.3	Atomic force microscopy	77
5.2.4	Nanoindentation data analysis	77
5.3	Results and discussion	80
5.3.1	Native mass spectra of the particles	80
5.3.2	Size of the Norwalk virus-like particles	80
5.3.3	Elastic properties of the particles	80
5.3.4	Buckling and breakage versus plasticity	83
5.3.5	Comparison to linear elasticity theory	84
5.3.6	Prestress increased rigidity and strength of NVLP	86
5.4	Conclusion	87
6	Folding-driven secretion mechanism of autotransporters	89
6.1	Introduction	90
6.2	Materials and Methods	94
6.2.1	Cloning and production of Hbp truncation mutants	94
6.2.2	Imaging and mechanical unfolding using AFM	96
6.2.3	Image and force-distance curve analyses	98
6.2.4	Computational estimate of unfolding parameters	100
6.3	Results and Discussion	102
6.3.1	Particle size distribution of the Hbp constructs	102
6.3.2	Multi-step and multi-route unfolding pathways of Hbp	104
6.3.3	Structure assignment of unfolding barriers	108
6.3.4	Barriers coincide with stacked aromatic residues	111

CONTENTS

6.3.5	Tracing the unfolding landscape of Hbp	113
6.3.6	Hbp unfolds in domains	114
6.4	Conclusion	117
	Bibliography	121
	List of Publications	161
	Summary	163
	Nederlandse Samenvatting	165
	Acknowledgments	167
