ASYMPTOTICS IN DECONVOLUTION MODELS

-APPROXIMATING PERFECT KNOWLEDGE-

STEFANIE DONAUER

About the cover:

The cover design is inspired by the title of this work. The image on the front cover illustrates from bottom to top the fact that we are examining the situation where the number of observations tends to infinity, the *asymptotics*. Hereby, we see observations as information related to the dark blue stickmen. However, in the *deconvolution model* the available observations rather correspond to the shifted light blue ones, and are therefore indirect.

prof.dr.ir. G. Jongbloed

ACKNOWLEDGMENT

During the past four years I have experienced many challenges and changes in my life. It is only because of the help and support of many, that I was able to handle them successfully and now look back to see these years as an interesting and important period of my life. I want to use this opportunity to thank all friends, family members and coworkers who were and are involved in my life in one way or another. A few of them deserve to be mentioned explicitly.

First of all, I am indebted to Piet Groeneboom and Geurt Jongbloed who gave me the opportunity to start my academic career at the Vrije Universiteit Amsterdam, working on a research project that was funded by the Nederlandse Organisatie voor Wetenschappelijk Onderzoek (NWO). Piet, I always appreciated your great ideas that lead to numerous helpful discussions and results contained in this thesis. Geurt, without your encouragement and always open ear things would have been much more difficult for me, especially during the first months in the Netherlands.

My gratitude also goes to Marloes Maathuis, Lutz Dümbgen, Bert van Es, Aad van der Vaart and Martien van Zuijlen for their readiness to act as referee for this work.

Discussions with Axel Gandy improved in particular the introduction. The translation of the summary into Dutch was done by Birgit Witte. Sandhai Bhulai's helpful introduction to Illustrator made the cover design possible. And Cheryl John as well as Martin Michael were willing to become my paranimfen. Thanks to all of you for your involvement and your friendships.

I also wish to thank those who helped me change and grow personally and in my faith. In particular I want to mention Erin Rogers and Anna Jansen, who had a great impact on my life. Thanks to both of you for your teaching and guidance that lead to so many accomplishments.

A final thanks goes to Martin Michael. It is also because of your endless patience and overall support that I could complete this thesis.
