I would like to thank my supervisor Prof. dr. Wim van Westrenen for his excellent supervision throughout my PhD. I honestly could not have asked for a better and more patient supervisor. Allowing me to pursue my own scientific problems of interest, sometimes not directly related to the PhD, has been of great value in my development of becoming an independent and interdisciplinary researcher.

This thesis would also have been an impossible task without the continued support from my family and wife. Mom and dad; thanks for all the support and promoting me to study and discover. Tanjung, your positivity, support and understanding have been absolutely essential for completion of my PhD. Sister and brother, thanks for always being there for me and supporting me throughout my thesis!

I would also like to thank Prof dr. Yingwei Fei for his supervision of my experimental work in the Geophysical Laboratory, Washington D.C. I am grateful to Dr. David Kring for his supervision during the inspiring intern at the Lunar and Planetary Institute in 2016 in which I learned a lot about many different planetary science topics. I would like to specifically thank Jasper Berndt, Tilly Bouten, Stephan Klemme, Sergei Matveev, Nachiketa Rai and Beate Schmitte for their assistance and help with many of the analyses presented in this thesis. I am also thankful of the assistance of Megan Duncan, Bouke Lacet, Jurriën Knibbe, Emma Bullock and Stefanie Luginbühl for the assistance in the analyses and experiments presented in this thesis. I also wish to thank the members of my dissertation committee for their assessment of this thesis.

I am also much indebted to Jasper Berndt, Arno Rohrbach, Beate Schmitte, Hugh O'Neill, Stephan Klemme, Sebastian Hackler, Dominik Lorocho, Michael Willig, Xenia Ritter, Vincent Kofman and Claudia-Corina Giese for the many fun times during coffee breaks and lunches at Münster University and other institutes. I would also like to thank Martijn Klaver, Sietze de Graaff, Max Janssen, Pim Kaskes, Eva Kelderman, Robin Putter, Fenny Bosse, Fraukje Brouwer, Rob van de Geer, Michael Gress, Elena Giovenco, Jurriën Knibbe, Wim van der Plas and Barbara Simon for the fun conversations and overall assistance at the Vrije Universiteit Amsterdam.

Finally, I would like to thank all the various students I worked with - the learning curve and/or passion of the students in their research was great to experience and provided an important source of inspiration for my own work.
