Contents

Acknowledgements .............................................. v

1 Introduction .................................................. 3
  1.1 Definition of Robot-to-Robot Learning ................. 5
  1.2 Scope .................................................. 8
  1.3 Contributions .......................................... 11

2 State of the Art ............................................. 17
  2.1 Related Research Fields ............................... 19
  2.2 Benefits of Robot-to-Robot Learning ................. 21
  2.3 Design Choices for Learning Partners ................. 23
  2.4 Design Choices for Knowledge Bits ................... 27
  2.5 Research Challenges ................................... 31

I Methodology ............................................... 37

3 Research Methodology ..................................... 39
  3.1 Conceptual Framework and Terminology ................ 40
  3.2 Design Choices ....................................... 41
  3.3 Robots and Simulation Platforms ...................... 55
  3.4 Tasks ................................................ 59
  3.5 Performance Metrics ................................... 63
  3.6 Concluding Remarks and Overview ..................... 68

4 Quantifying Selection Pressure ......................... 71
  4.1 Importance of Quantifying ............................ 72
  4.2 Methods to Quantify Selection Pressure .............. 77
  4.3 Analysis of the Metrics Behaviours ................... 83
  4.4 Case Studies .......................................... 88
  4.5 Concluding Remarks ................................... 101
## CONTENTS

### II Increased Learning Speed and Performance 103

5 Experiment Set 1: Adapting Sensory Layout 105  
5.1 System Description ........................................ 107  
5.2 Experimental Setup ....................................... 110  
5.3 Experimental Results ..................................... 112  
5.4 Concluding Remarks ....................................... 121  

6 Experiment Set 2: Increased Task Complexity 123  
6.1 Three-Fold Adaptivity for Increased Task Complexity .... 124  
6.2 Two-Fold Adaptivity for Increased Task Complexity .... 130  
6.3 Discussion .................................................. 140  
6.4 Concluding Remarks ....................................... 141  

### III Reduced Sensitivity 143

7 Reduced Parameter Sensitivity 145  
7.1 System Description ........................................ 147  
7.2 Experimental Setup ....................................... 149  
7.3 Experimental Results ..................................... 151  
7.4 Discussion .................................................. 156  
7.5 Concluding Remarks ....................................... 159  

8 Importance of Diversity for Increased Task Complexity 161  
8.1 System Description ........................................ 163  
8.2 Experimental Setup ....................................... 165  
8.3 Experimental results ...................................... 167  
8.4 Discussion .................................................. 172  
8.5 Concluding Remarks ....................................... 174  

### IV Towards Situational Robot-to-Robot Learning 181

9 CoRDs: Context Recognition in Data Streams 183  
9.1 Related Work ............................................... 187  
9.2 Algorithm Description .................................. 191  
9.3 Experimental Setup ....................................... 195  
9.4 Experimental Results ..................................... 205  
9.5 Discussion .................................................. 214  
9.6 Concluding Remarks ....................................... 219
