Contents

1 Introduction **1**
- 1.1 Prologue 1
- 1.2 Determination of the proton-electron mass ratio μ_{pe} 3
- 1.3 The hydrogen molecular ion HD^+: Benchmark system for testing molecular theory 4
- 1.4 Fundamental constants from HD^+ 6
- 1.5 Test of the Standard Model of particle physics and search for physics beyond it 8
- 1.6 Vibrational spectroscopy of the HD^+ ion 10
- 1.7 Outline and summary of this thesis 11

2 Necessary background information **15**
- 2.1 Advances in *ab initio* calculations of the energy levels of HD^+ 15
  - 2.1.1 Summary of recent advances in the calculations of the ro-vibrational transition frequencies of HD^+ 15
  - 2.1.2 Hyperfine structure calculation 16
- 2.2 Summary of spectroscopy of the $(v, L) : (0, 2) \rightarrow (8, 3)$ overtone in HD^+ 17
- 2.3 Doppler-free two-photon spectroscopy of ro-vibrational transitions of HD^+ 23
  - 2.3.1 Feasibility study 23
  - 2.3.2 Limitations of the OBE model 30

3 Experimental setup **33**
- 3.1 Laser-cooling of Be^+ ions and the ion trap setup 33
  - 3.1.1 Ion trap setup 33
  - 3.1.2 Laser-cooling setup for Be^+ ions 35
  - 3.1.3 Experimental control and automation 39
  - 3.1.4 Performance of the ion trap and laser-cooling setup 43
- 3.2 Frequency stabilisation of the spectroscopy lasers 44

3.2.1 The optical frequency comb (OFC) and the ultra-stable laser 45
3.2.2 The transfer-oscillator locking scheme 46
Principle and implementation 46
Performance of the frequency stabilisation scheme 54
Effect of intra-office optical fibre on the spectra purity of the lasers 58
Selection of f_{rep} of the OFC for multiple lasers 60

4 *A priori* determination of required experimental parameters 63
4.1 Introduction 63
4.2 Choice of hyperfine components 64
4.2.1 Zeeman shifts 64
4.2.2 Suppression of Doppler-broadened background 66
4.3 Modelling the Doppler-free two-photon spectrum: *a priori* determination of required experimental parameters 68
4.3.1 Brief review of the rate equation model 69
4.3.2 Calculation of the $(v, L) : (0, 3) \rightarrow (4, 2) \rightarrow (9, 3)$ Doppler-free two-photon spectrum: results 72
4.3.3 Estimate of frequency shift due to underlying Doppler-broadened background 77
4.4 Zeeman and AC Stark shifts 79
4.4.1 Zeeman shift 79
4.4.2 AC Stark shift due to the cooling laser at 313 nm and the dissociation laser at 532 nm 81

Appendices 84
4.A AC Stark shift due to the cooling laser and the dissociation laser 84

5 Ghost features in Doppler-broadened spectra of ro-vibrational transitions in trapped HD^+ ions 87
5.1 Introduction 87
5.2 Brief review of the rate equation model 88
5.3 Calculation of the $(v, L) : (0, 3) \rightarrow (4, 2)$ spectrum 90
5.4 Ghost features in $(v, L) : (0, 3) \rightarrow (4, 2)$ single-photon spectrum 92
5.5 Significance of ghost features for spectroscopy of trapped ions 99
5.6 Summary and conclusion 100

6 Proton-electron mass ratio from HD^+ revisited 103
6.1 Introduction 103
6.2 Improvement in theory 104
6.3 Comparison between experiment and theory 107

6.4 Determination of the proton-electron mass ratio μ_{pe} 110
6.5 Outlook and conclusion 115
6.6 Acknowledgments 116

7 Observation of the $(v, L) : (0, 3) \to (9, 3)$ two-photon transition in HD^+ 117
7.1 Doppler-broadened $(v, L) : (0, 3) \to (9, 3)$ ro-vibrational transition in HD^+ 117
7.2 Doppler-free two-photon $(v, L) : (0, 3) \to (9, 3)$ transition in HD^+ 119
7.2.1 Experimental protocol and measured spectrum 119
7.2.2 Statistical test to distinguish "signal" from "noise" 123
The statistical test 123
Welch's t-test 125
Statistical analysis of the measured spectrum 126

Appendices 130
7.A Choice of optimum REMPD duration for the Doppler-free two-photon spectroscopy experiment 130

8 Conclusion and Outlook 135

Bibliography 137

Acknowledgement 153
