Contents

Chapter 1 Introduction	1
1.1 Time series	2
1.2 Bayesian inference	3
1.3 Simulation methods and numerical efficiency	4
1.4 Thesis outline	6
Chapter 2 Bayesian Risk Evaluation for Long Horizons	9
2.1 Bayesian risk evaluation using importance sampling	12
2.1.1 Tail focused importance density	14
2.1.2 Approximations by mixtures of Student's t distributions	16
2.1.3 Sequential construction of marginal/conditional importance densities	18
2.2 Bayesian applications	21
2.2.1 GARCH(1,1)- t	21
2.2.2 GAS(1,1)- t	29
2.3 Frequentist QERMit	35
2.3.1 GARCH(1,1)- t	36
2.3.2 GAS(1,1)- t	38
2.4 Conclusions	43
Appendices	
2.A MitISEM Algorithm	44
2.A.1 Approximation by minimisation of Kullback-Leibler divergence . . .	44
2.A.2 EM step in MitISEM	45
2.B PMitISEM Algorithm	48
2.C Accuracy plots	50
2.C.1 Bayesian applications	50
2.C.2 Frequentist applications	50
2.D Time-precision plots	55
2.D.1 Bayesian applications	55
2.D.2 Frequentist applications	55

Chapter 3 Partially Censored Posterior for Robust and Efficient Risk Evaluation	61
3.1 Censored likelihood and censored posterior	64
3.1.1 Scoring rules in density forecasting	66
3.1.2 Advantages and disadvantages of CP: toy application	68
3.2 Partially Censored Posterior	70
3.2.1 Definition and MCMC algorithm <i>Conditional MitISEM</i>	70
3.2.2 Variance reduction with <i>PCP-QERMit</i>	73
3.2.3 Simulation study: AR(1) model	77
3.3 Time-varying threshold	78
3.4 Empirical application	82
3.5 Conclusions	86
Appendices	
3.A Bayesian out-of-sample forecasting	89
3.B Conditional density of (mixture of) multivariate Student's t distributions .	91
3.C Density estimates	93
3.C.1 I.i.d.	93
3.C.2 AR(1)	95
3.C.3 GARCH(1,1)	97
3.C.4 AGARCH(1,1)	98
3.D Loss differential plots	99
Chapter 4 Semi-Complete Data Augmentation	101
4.1 State space models	103
4.2 Semi-Complete Data Augmentation	105
4.3 Approximations for MCMC sampling	110
4.3.1 Approximation bins as hidden Markov model states	111
4.3.2 Hidden Markov model likelihood	113
4.4 Applications	116
4.4.1 Ecological model: lapwings data	118
4.4.2 Financial model: stochastic volatility	131
4.5 Discussion	146
Appendices	
4.A Specification details of the HMM approximations	148
4.A.1 Motivating example from Section 4.3.2	148
4.A.2 Lapwing population model	151
4.A.3 SV model	152

4.B	Lapwings dataset	153
4.C	Conditional state distribution for the SV model with leverage	155

Chapter 5 Forecast Density Combinations of Dynamic Models and Data Driven Portfolio Strategies **157**

5.1	Modelling of US industry returns based on stylised facts	160
5.2	Data-driven portfolio strategies	163
5.3	Weights estimation of Forecast Density Combination	166
5.3.1	Timeline of model estimation, construction and portfolio holding . .	168
5.3.2	Density combinations of model forecasts and strategy returns . . .	170
5.3.3	MFilter	172
5.4	Empirical application	178
5.4.1	FDCs using individual models and strategies	179
5.4.2	FDCs using sets of models and strategies	183
5.5	Conclusions	191

Appendices

5.A	Models within the FAVAR-SV class	192
5.A.1	Linear and Gaussian dynamic factor model	193
5.A.2	Linear dynamic factor model with stochastic volatility)	194
5.A.3	Linear dynamic factor model with two stochastic volatility components	197
5.A.4	Factor augmented VAR models with stochastic volatility components	197
5.B	MFilter algorithm	199
5.C	Simulation results for MFilter	201
5.C.1	Local level model	201
5.C.2	Stochastic volatility model	202
5.C.3	Dynamic factor model	203
5.D	Additional empirical results	205
5.D.1	Individual model-strategy pairs	205
5.D.2	Combinations of model-strategy pairs	205

Chapter 6 Summaries **209**

6.1	English summary	209
6.2	Nederlandse samenvatting	211

Bibliography **213**
