Above all else, the work presented in this thesis has been a great learning experience for me. It has been an opportunity for me to work together with some of the smartest and most inspirational people I’ve met in my life. All of you deserve credit for this final results. The following is a brief, and by no means comprehensive, list of those without who I would never have been able to get to this point. Know that all of you have forever changed who I am, and for that I can never thank you enough.

First of all my supervisors. Niels, whose endless creativity and support allowed me to face the challenge of subjects more complex than I ever would have dared to face before. The integrity you show as a scientist is something I will always admire. Matthijs, with your wisdom and insight in the world of academia you have had a greater impact in my academic career than anyone, for that I will always be grateful.

I also want to thank all the PIs in the FGA. Jan, Wiep, Sander, and in particular Ruud, who I had the distinct pleasure of working together with on a publication. All of you have always kept me on my toes with your sharp insights and suggestions, which have made me a better scientist. My special thanks to the members of the committee for reading this thesis, and agreeing to challenge me during the defense.

Of course none of this would have been possible without the generous support from Els. Throughout my PhD I’ve always felt that I can rely on you. I hope you do not feel I have done so too often. Robbie, Desiree, and Joost the three of you are not only essential to keeping the lab going, you are also responsible for making it so much more than just a place to work. Together, you form the heart of the FGA family. Thank you for all the drinks, all the dancing, all the singing, and for making me feel home. Joke, thank you for taking care of all my mouse lines, and for patiently explaining to me so often the inner workings of the colonies. Ingrid, it seems to me there is nothing you cannot do in the lab. Thank you for all your help over the years, especially for all the times you were willing to jump in at the last minute, when no one else could. Rien, there is no better man to ask about EM, thank you for all your efforts. Bastijn, though it may have been only a side project for you, your work on the Ephys portal has been essential for us, many thanks. Frank, though you’ve left the lab, your help making tremendous amounts of glia islands for me cannot go unmentioned. I also want to thank the newer members of the support team: Sjaak, Lisa, and Eline. Without all of you I never would have been able to finish this thesis.

In order to establish the perfect conditions required for making electrophysiology recordings true miracle workers are required. Hans, you definitely fall into that category. I have never encounter a problem you could not fix. Without you, I probably would not have been able to patch half as many cells as I did. Jurjen, I don’t think there is anything you don’t know about the setups in the lab, and I cannot even remember how often I came to ask you for help with technical problems. Thank you for never saying no. Marieke and Enqi, I was extremely lucky to have patch masters like you on the setups next to me. You’ve taught me almost everything I know about ephys. I am very grateful for that, though perhaps I’m even more grateful for all the nonsense we talked about during the dark days of bad cells. I would also like to give a special mention to Mohit. Your drive and passion for science is an inspiration, and your extensive ephys knowledge has always challenged me to dig deeper.

Many of you, perhaps even most of you, have gone well beyond being simply my colleagues. Alessandro, I could not have wished for a better friend during my PhD. Without our endless conversations about science, and pretty much everything else, I probably would have given up on a career in academia. Your unstoppable curiosity has been a constant reminder of why science is worth doing. Roberta, our smoking breaks have been essential in keeping me going on all the days when I could no longer see the light. You were always there get my motivation back up, and, when necessary, push me out of my comfort zone. Your personal strength will always be an inspiration to me. Javier, though for a while you were both my house and office mate, I would still always be up for hanging out some more. Whether for drinks, board games, random discussions, or any of the other activities you would regularly invite me to. I look forward to hanging out some more again soon. To all the other people that shared the office with me. Quentin, thanks for all the support you provided sitting next to me in the office. Even late at night when the work seemed endless, your sarcastic touch always put a smile on my face. Swati, sitting on the other side, I will never cease to be amazed by how many things you know. Though I still have to find a use for many (*most) of the facts you’ve told me, I’m very happy you shared them with me. Marghe, thank you for answering all the biology questions that I was too embarrassed to ask anyone else. I’m sorry I told you so many things you didn’t want to know in return, I’m very happy you always listened anyway. Joris, your enthusiasm for learning new things is enviable, thank you for infecting me with some of it. Matthias, your incredible stories and sharp world views were always worth listening to. I’m going to miss it. Daniël, the puns… keep it coming, you know I love them. Marta and Jian, you are great additions to the vampire cave. It’s a shame we didn’t get to share an office

for longer. Maaike, your work, critical questions, and creative suggestions have been truly essential for this thesis. You and Alexia were the best students I could have ever wished for.

All my fellow patchers, you know better than anyone the struggle of getting a good recording. Rocío, though I believed sharing a setup could never be a pleasure, you proved me wrong. Jovana, while you do so much more than just patching, I will always consider you one of us. I’m going to miss your stories and hilarious anecdotes you shared over coffee. Jessica, most people when they ask how things are going don’t really expect a response. I’ve always felt that you did, and I really appreciate that. Lola, Hanna, Jessie, and Andrea thanks for all the chitchat around the setups or the puller whenever I needed a break. It always gave me the energy required for another attempt.

Many thanks also to all my other colleagues at the CNCR, never before in my life have I been around such an inspiring group of people. Sonia, your ability to laugh about yourself never fails to put me in a better mood. Maria, you are one of the sweetest people I know, don’t ever stop being you. Linda, whether due to a bet or not, it was always a pleasure to share some wine with you. Fabian, you never fail to surprise me. I still don’t understand how a one person can do so many interesting things. Vera, Rhode, Annemiek, Rein, Nikki, Ernesto, Kevin, Kim, Rik, Marieke, Marinka, Claudia, Tim, Aygul, Femke, Mats and Loek. Thank you for all the parties, all the breaks, all your help, all the discussions, and in general for making the lab feel like a second home. Though not technically colleagues, Axel, Anna, Sanne, and Myrna, you are definitely also part of what made my time at the CNCR so great. Finally, to my former and more senior colleagues: Tatiana, Anna, Girish, Cillian, Natalia, and Fatima, thank you for showing me what it means to be a scientist, at a time when all I knew was how to be a student.

Many thanks also to all my friends outside the lab, for reminding me that life is more than just doing a PhD. Jander and Mari, I will probably always rely on you for getting a sane perspective on the perplexing world of academia. Thanks for the many late nights playing video games, watching movies, and talking about just about anything. Chrysanthi, thank you for all the fights. Though I like to disagree, your radical perspectives have, over time, changed me to my core. We can argue whether that has been for the better or not. Judit and Keith, thank you for always receiving me with a smile. It’s rare to find people that always make you feel welcome, seemingly no matter the situation. Georgia and Lennaert, it’s such a shame we did not meet each other earlier. Thank you for all the dinners, game nights, and drinks from questionable sources. Nick

and Dimy, time and distance have not made it easy to stay in touch. Yet whenever we see each
other you always make me feel like no time passed at all.

A big obrigado also to my new extended family. Gonçalo, thank you for all the doors you’ve
opened for me, both in your home and in your heart. Paula, I’m very happy that I could never
convince you that I didn’t need to be taken care of. You’ve truly been a mother away from home.
Kika, your humor always brightens my day, and though so far I’ve failed more often than I
succeeded I will keep trying to make you laugh with one of my jokes. Henrique, your presence
always makes things easier. I’m happy to have a companion like you to face the drama of the
Quadros sisters together. Gonçalinho, no one has ever believed more in my football skills than
you do. Though it probably did not help with this thesis, it definitely increased my self-esteem.
João, Inês, Maria, and Dan, I hope you know you will never be able to get rid of me now. Thank
you all for welcoming me with open arms.

Papa en Mama, jullie wisten natuurlijk al lang dat jullie essentieel zijn geweest voor alles wat ik
tot nu toe bereikt heb. Maar het is toch goed om het nog eens te herhalen. Bedankt voor al jullie
liefde, ondersteuning, en goede raad. Dit is net zo veel jullie succes als de mijne. Mischa, grote
zus, ook jij bent er door de jaren heen altijd voor mij geweest. Met al jouw eigen successen, je
moed en doorzettingsvermogen ben je mijn belangrijkste inspiratiebron. Mihir, I could really not
have had a more supportive brother in law than you. Thank you for all your faith in me, which we
both know is far greater than it has any right to be.

Ana Rita, the final words are of course reserved for you. However, no words could ever express
how much you mean to me. I hope that, without words, I can still make you feel that.
