TABLE OF CONTENTS

Chapter 1	General introduction and outline of the thesis	7
Part I Assessment of energy expenditure in the critically ill		
Chapter 2	Ventilator-derived carbon dioxide production to assess energy expenditure in critically ill patients: proof of concept <i>Crit Care. 2015 Oct 22;19:370</i>	19
Chapter 3	VCO ₂ -derived energy expenditure: do not throw the baby out with the bath water! <i>Crit Care. 2017 Apr 5;21(1):82</i>	41
Chapter 4	Indirect calorimetry in critically ill mechanically ventilated patients: Comparison of E-sCOVX with the Deltatrac <i>Clin Nutr. 2019 Oct;38(5):2155-2160</i>	47
Part II Assessment of body composition in the critically ill		
Chapter 5	Bioelectrical impedance analysis-derived phase angle at admission as a predictor of 90-day mortality in intensive care patients <i>Eur J Clin Nutr. 2018 Jul;72(7):1019-1025</i>	63
Chapter 6	Identifying critically ill patients with low muscle mass: Agreement between bioelectrical impedance analysis and computed tomography <i>Clin Nutr. 2019 Aug 10 [Epub ahead of print]</i>	79
Part III The role of protein in critical care nutrition		
Chapter 7	Optimal protein and energy nutrition decreases mortality in mechanically ventilated, critically ill patients: a prospective observational cohort study <i>JPEN J Parenter Enteral Nutr. 2012 Jan; 36(1):60-8</i>	111
Chapter 8	Amino acid loss during continuous venovenous hemofiltration in critically ill patients <i>Blood Purif. 2019 Jul 10:1-9 [Epub ahead of print]</i>	129
Part IV Summary and discussion		
Chapter 9	Summary	147
Chapter 10	General discussion and future perspectives	157
Part V Appendices		
	Abbreviations	173
	Dankwoord / Acknowledgements	175
	About the author	177
